

Microtome and Cryostat Blades

CellPath's range of GP Blades offer excellent longevity and improved cutting.

Manufactured from stainless steel with a robust and unique coating, our GP microtome blades are ideal for all microtomy applications, and highly effective for routine histology.

The incorporation of a triple faceted edge with 35-degree cutting angle not only improves longevity of the microtome blade, but also ensures excellent ribboning through a precise and easy cut-up. The blades have rounded corners, improving user safety.

The unique coating provides greater durability by protecting the cutting edge for longer, reducing laboratory microtome blade costs in the long-term.

Available in either low (GPX) or high (GPH) profile, our microtome blades are suitable for all tissue types. A cryostat blade (GPC) is also available within the range, suitable for the most widely used cryostats.

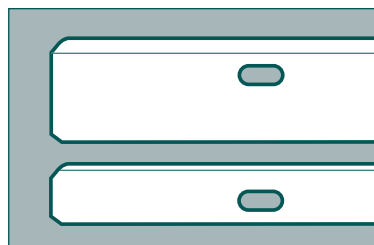

The GPC blade is thicker than a standard microtome blade to facilitate better knife safety when sectioning on a cryostat.

GPC are high-profile blades are specifically designed to facilitate the cutting of thicker sections, as they can withstand the force of speed and thickness.

All blades are accommodated in an easy-to-use dispenser, further ensuring the safety of the user.

Dimensions

- Low profile: 80mm x 8mm x 0.25mm
- High profile: 80mm x 14mm x 0.30mm
- Cryostat profile: 80mm x 14mm x 0.30mm

Item Code	Description	Quantity
JDD-1000-00A	GPX Microtome Blade	50 Blades
JDD-1100-00A	GPH Microtome Blade	50 Blades
JDD-1200-00A	GPC Cryostat Blade	50 Blades

KEY BENEFITS

- 1 Superior longevity over rival microtome and cryostat blades
- 2 Optimised cutting edge provides a very precise cut
- 3 Suitable for all tissue types
- 4 Available in both low and high profile, with a cryostat blade also available
